Pension assets in the UK had seen steady year-on-year increases until COVID

Total pension assets in the UK; as a multiple of GDP

Events shaping the UK's pension market over the last 20 years

Pension Act of 2004 relaxed the stringency of minimum funding requirements for pensions, allowing more capital to be invested

The fall on interest rates during the GFC meant a "doublewhammy" on pension assets, as equities decrease, and funding requirements increased with growing liabilities

The gradual introduction of **auto-enrolment in 2012 and workplace pensions saw a meaningful increase in the number of employees contributing to a pensions** (e.g., contributions from private sector employees grew from 39% to over 75%)

Pension assets grew at market rates from 2017 to 2021, outpacing GDP

The equities downturn and a sharp decrease in interest rates in the wake of COVID, in addition to the UK's Minibudget of September 2022 had a meaningful effect on total pension assets in the UK as well as other markets with significant pension assets

Institute

UK's pension systems lags versus that of other comparable countries and is facing a series of serious challenges today

High fragmentation of funds

The UK has over 6,200 DB and DC funds versus leading countries like Australia, where the 16 largest funds hold up to 70% of total pension assets

Limited investment in the UK

Around 5% of pension assets are invested in UK assets (equities, bonds, or real assets), while Australia and The Netherlands invest over 30% of pension assets in the local economy

Insufficiency of state pensions

At £221 per week, the full state pension for the UK lags countries like the Netherlands, who offer 20% more¹ in state pension

Low contributions to workplace pensions

The minimum contribution set for employers on workplace pensions is 3%, markedly lower than Australia with 10.5% and the Netherlands with 11.5%; moreover, in both countries, contributions are mandatory

Current fee-structures undermine performance

The cap government-mandated cap on 0.75% per year on the total cost of managing pension funds dos not incentivise active and performance-oriented investment

Assumes 68.1m people in 2025, and 71.6m in 2050

What are the

facing the UK

pension system

today

biggest challenges

Source: OECD, Funded Pension Indicators, 2024; United Nations, Department of Economic and Social Affairs, Population Division. World Population Prospects: The 2022 Revision.

NOTES: 1. State pension in the Netherlands equals ~£260 per week (assumes the basic benefit of a single person of 1,334 euros per month and an exchange rate of 0.85 pound sterling to euro)

Ageing population

The UK.s population is expected to age materially over the next 25 years, with an **additional 5m people** above the current State Pension Age

UK demographics by age group;

...with tangible solutions that have been tested in other geographies

...and potential solutions

What are the biggest challenges facing the UK pension system today	High fragmentation of funds	 Evaluate performance of current funds, including fund performance, fees and quality of service to promote consolidation of funds Introduce Collective Defined Benefit Funds
	Limited investment in the UK	 Consolidation of funds to allow larger pools of capital for investment Government incentives (i.e. tax incentives to invest in projects in the UK like housing, infrastructure)
	Insufficiency of state pensions	 Raise level of the minimum state pension Increase the State Retirement age
	Low contributions to workplace pensions	 Increase minimum contributions Remove opt-out option for auto-enrolment Expand NEST or introduce a collective defined contribution scheme for all self-employed/ informal workers
	Current fee-structures undermine performance	Remove fee-cap and focus on net returns
